Phase3 Lesson End Project:

Write Ups:

Algorithm:

Step1: Create a Maven Project

• Add the Dependencies in the POM.xml file

Step2: Convert the maven project into cucumber project

Step3: In src/test/java we need create a packages like Features and Steps.

Step4: Create a feature file in the features folder and in that we have to create a file and we have to write the code

Step5: Next in the project we have to create a folder called resources and we need to create a JSON file in the resources folder.

Step6: Then in the Steps we need to create a java class and we have to write the code.

Step7: Later in the feature file we have to run with cucumber feature

Step8: Then we will get output

Step9: Create a repository in the GITHUB

Step10: Then push all the files in the repository.
